Primed Minds Style Guide

File Locations

- Images – "assets/[page name]/[img title].jpg
  - i.e. an image for the about page would be under: assets/about/arrow.jpg
- Javascript
  - That you wrote yourself - "javascript/[page name].js"
    - NOTE: name of the js file should match the name of the .html!
    - i.e. about.html will link to javascript/about.js
  - That you import – "public/javascript/name.js"
  - Avoid putting scripts into the html file itself.
    Instead, place them in a separate .js file linked to your .html
- CSS – "stylesheets/[page name].css
  - NOTE: name of the CSS file should match the name of the .html!

Naming

- **Static Global Variables:** name with ALL_CAPS_AND_UNDERSCORES
  - if this variable isn't going to change throughout the code but is used multiple times
  - i.e. GRAPH_HEIGHT = 500;
- **Other variables:** lowerCamelCase
- **Functions:** lowerCamelCase
- Descriptive names
  - "monsters", not just "object"
- No unnecessary adjectives
  - Do not use "mySlides", just "slides"

General

- Opening brackets are preceded with a space but are on the same line {
  // The rest of your code goes here and is indented one tab
  // The following lines should be the same indentation.
  // If you open another bracket {
          // Start another indent
  } // But close it on the same line!
  }; // Closing brackets go on their own separate line
- Comment comment comment! When in doubt, comment about every 20 lines
  - Quick comments at the top of a function describing what it does go a long way!
- Break down functions
  - Try to have functions remain about 20 lines or less
  - If the function starts getting really long, ask yourself if you could break it up into two
